- To protect public safety and minimize traffic obstructions, no bison hunting is allowed within 100 yards of major highways.
- Hunting on national forest lands must follow restrictions in USFS order 36 CFR 261.10 (d) (firearm discharges are prohibited within 150 yards of residence, building, campsite, developed recreation site, or occupied area or across a forest service road or body of water).
- License quotas, hunting district boundaries, and season structure can be modified by FWP Commission authority.
- Hunting hours authorized for the taking of big game animals begin one-half hour before sunrise and end one-half hour after sunset each day of the hunting season. See official 2006 Sunrise-Sunset Tables in these regulations.
- As adopted under SB395 (MCA 87-2-730) FWP shall not provide actual physical location of wild bison other than the prescribed hunting district where the animal may be taken.
- Hunting is subject to 24-hour closure in the event it becomes necessary to allow for hazing under the Interagency Bison Management Plan.
- All permitted hunters will be required to participate in a hunt orientation with FWP staff. Hunters must contact an FWP Regional office (see listings in these Regulations) to schedule the orientation.
- Hunting shall be only by foot or horseback.
- It is unlawful to possess or transport the fetus or reproductive tissues of a bison away from the kill site. This shall not include specifically minimized tissues naturally attached to the carcass or a portion of the carcass as necessary for evidence of sex as follows:
  - Male: head with horns or penis.
  - Female: head with horns or vulva.

## Information and Recommendations –

- Bison can achieve a live weight of up to 2,000 pounds, and can be very difficult for the average person to field dress alone. Participants should bring several people with them, or hire an outfitter to assist with the field dressing and handling of their bison. If participants plan to field dress and load their own animal, axes, knives, saws, and block and tackle may be necessary.
- Due to the bison's immense size and thick hide, palatable meat may spoil quickly without immediate and proper care. It is recommended that bison be skinned and quartered within five hours of the kill. The hide should not be left on the bison overnight, even if it is hanging.

## Brucellosis –

- Bison in Yellowstone National Park carry bacteria that cause a disease known as brucellosis or bang's disease. The disease-causing bacteria can be transmitted from bison to cattle. If domestic cattle are infected, there are negative effects to individual cattle producers in the form of a loss of production, loss of markets, and costly preventative measures, including vaccination. Brucellosis in Yellowstone National Park bison is one of the primary reasons that attempts are being made to control bison in Montana.
- Brucellosis in bison is caused by a bacterium that can also infect humans. In humans, brucellosis is called undulant fever. Symptoms include intermittent fever, chills, night sweats, body aches, poor appetite and weakness. If undulant fever is treated early, it is fairly easy to cure. However, if the disease reaches a chronic stage, treatment is difficult.
- In bison, the bacteria is concentrated in the lymph nodes, reproductive organs and the udder. Cooking destroys bacteria that may be present in the meat. Thus, when thoroughly cooked, the meat is safe to eat. You can protect yourself by following these handling tips:
  - Consider every bison to be potentially infected. The results of blood tests show that about 50 percent of the bison are exposed to brucellosis.
  - Always wear protective gloves when dressing carcasses or handling viscera.
  - Avoid contact with milk or material from the reproductive tract.
  - Avoid touching your eyes, nose or mouth until you have scrubbed after handling the animal.
  - Individuals with open sores or cuts on their hands should be especially careful.

- Discard organ meats.
- Thoroughly cook all meat consumed.
